

# Conversion Services for the Life Sciences

Including Pharmaceutical, Medical Device, Veterinary, OTC & Cosmetic Manufacturers

## Regulatory & Compliance Services Such as SPL & ACA6004

DCL is on the forefront of providing conversion services in all areas of the Life Sciences. From Structured Product Labeling (SPL) to standard response packages, research manuscripts, publications and reference materials to electronic medical records, DCL has worked with it all and pioneered a great deal of it.

With the FDA mandate that all package labeling for prescription pharmaceuticals be converted to XML, DCL utilizes the SPL DTD to convert thousands of labels for more than 150 companies. As this mandate expands, we are well positioned to handle all product types. DCL is a member of the SPL Working Group, having created most SPL Working Group data samples.

We are experts in offering comprehensive SPL conversion including prescription drugs, OTC products, veterinary medicine, homeopathic products, and bulk ingredients. With a hybrid approach that ensures your project is planned effectively and efficiently, DCL provides you with consulting and project management services for current or planned internal capabilities, including mentoring your internal team throughout the project development.

### DCL supports the following requirements:

- Establishment regulations
- NDC labeler code requests
- Drug product listings
- Content-of-Labeling
- High volume bulk conversions
- Individual labels
- Guaranteed performance

### DCL services the following industries:

- Biotech
- Hospitals
- Medical Devices and Equipment
- Medical Records
- Pharmaceutical
- Veterinary Medicine

### Conversion services include:

- **Compliance and Regulatory:** Structured Product Labeling (SPL) and ACA6004.
- **Electronic Medical Records (EMR):** Involvement with an HL7 initiative for the automation of medical records of which the SPL initiative is one of the earlier regulatory efforts.
- **Medical Literature:** Documents and research manuscripts for publication and for online databases, for corporate use, for STM publishing, and for governmental agencies, including NIH.
- **XML and PDF databases:** Processing of documents, policy manuals, research documents, and more.

**Uncompromised quality 100% of the time!**
